(54) Title: NONINVASIVE NONLINEAR SYSTEMS AND METHODS FOR PREDICTING SEIZURE

(57) Abstract: The present invention relates
to methods and devices for noninvasive
nonlinear prediction of ictal onset in
patients afflicted by neurological disease.
In particular, the present invention provides
methods and devices for noninvasive
nonlinear prediction of seizures in patients
afflicted with epilepsy. The devices and
methods preferably being based on analysis
of two or more electroencephalogram (EEG)
recordings, one set of recordings taken from
an electrode close to the region of ictal onset,
and a second or more set of recordings (e.g.,
concurrent readings) taken from a region
remote from the region of ictal onset.

* Special categories of cited documents:	
"A" document defining the general state of the art which is not considered to be of particular relevance	"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"E" earlier application or patent published on or after the international filing date	"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)	"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"O" document referring to an oral disclosure, use, exhibition or other means	"&" document member of the same patent family
"P" document published prior to the international filing date but later than the priority date claimed
